Towards Net Zero:

the Energy Transition Team's journey

MAERSK

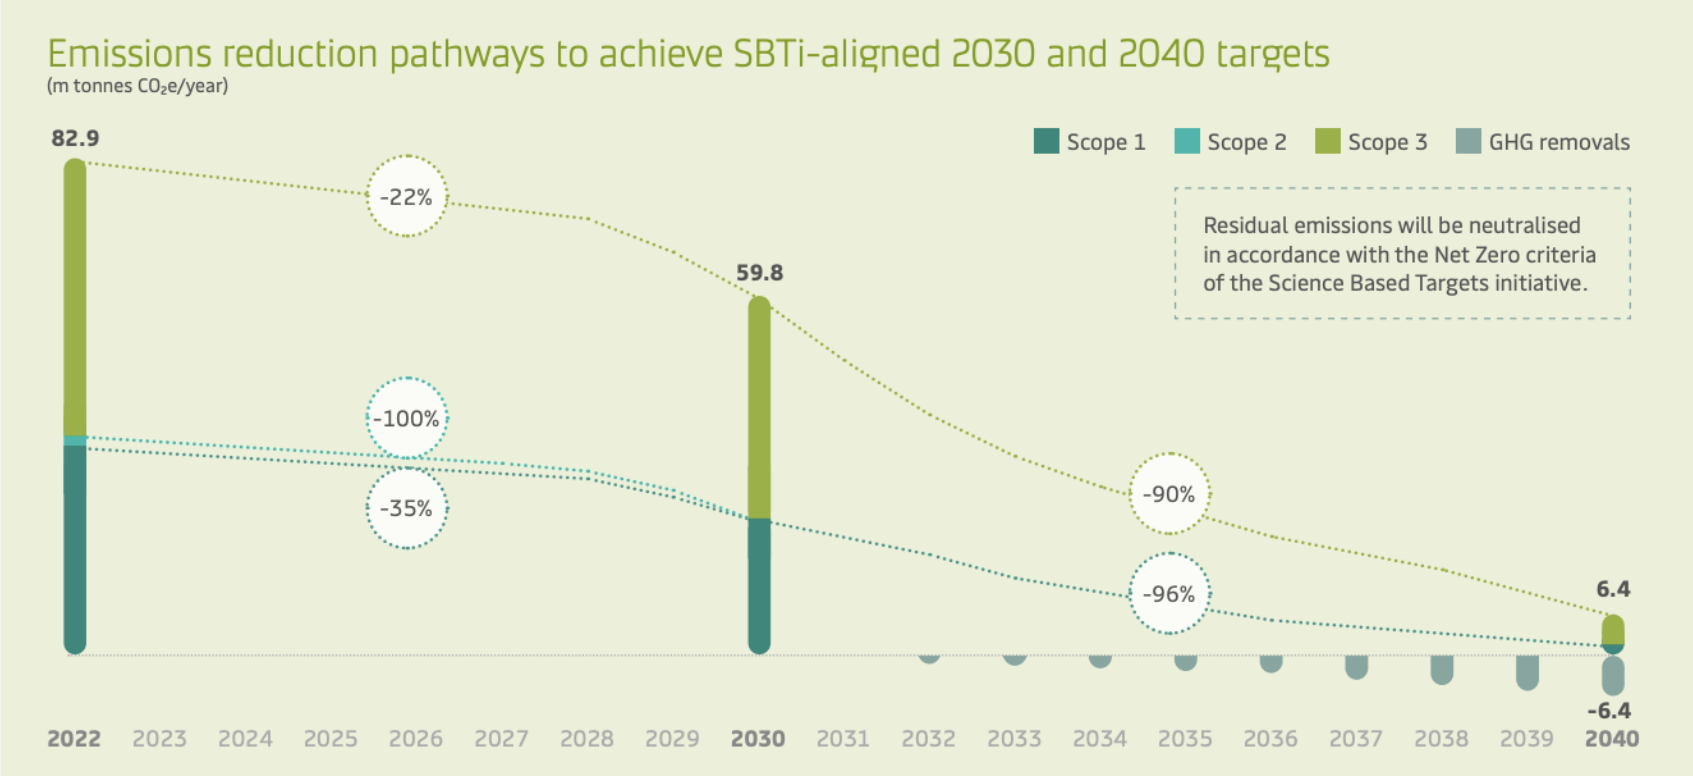
What Are We Trying To Do?

ET platform

"Ensure Maersk realises our Net Zero 2040 targets by providing definitive emissions data and technology services that support customer decarbonization ambitions and drive ECO product adoption"

Maersk's GHG emissions footprint 2023 (2022)
in 1,000 tonnes CO_2e

79,462 (82,877)	**Total GHG emissions** Including scope 1, scope 2 (location-based), and scope 3 emissions
34,138 (34,453)	**Scope 1 emissions – from financially controlled own operations** Where 92% of the emissions come from our ocean operations related to fuel use
386 (444)	**Scope 2 emissions – from generation of purchased electricity (location-based)** Where 56% of the emissions come from our terminals
44,938 (47,980)	**Scope 3 emissions – created in the value chain as result of Maersk's business activities** Including emissions from cargo transported under vessel-sharing agreements and sourcing of marine fuels to third-party customers. The main drivers of these emissions are:
20,465 (26,575)	• Upstream transportation and distribution
10,428 (8,799)	• Use of sold product (incl. sale of marine fuels and reefer containers to third parties)
5,728 (3,248)	• Purchased goods and service
5,653 (5,949)	• Fuel and energy-related activities



The Pillars of the ET Platform Team

Ocean Emissions	Optimising Net Zero 2040 journey
ECO Product Delivery	Energy Markets

Ocean Emissions

"Support transported, fulfilled and managed by Maersk customers to comply with emissions regulations and, through Maersk, achieve their own decarbonisation goals"

Optimising Net Zero 2040 journey

ECO Product Delivery

Energy Markets

Optimising Net Zero 2040 journey

"Ensure Maersk and our suppliers reach Net Zero 2040 targets by providing the trusted emissions information and insights needed to realise the economic delivery of decarbonisation roadmaps across the business"

Ocean Emissions

ECO Product Delivery

Energy Markets

Ocean Emissions

Optimising Net Zero 2040 journey

ECO Product Delivery

Energy Markets

"Optimize vessel bunker plans to ensure the lowest possible bunker spend is realized to execute our expected vessel schedules, setting the foundation for optimizing green fuel sourcing in an emissions trading system (ETS) environment."

"Provide integrated technology services to enable rapid, commercially viable scale-up of ECO products and thereby achieve 30% sustainable energy usage by 2030"

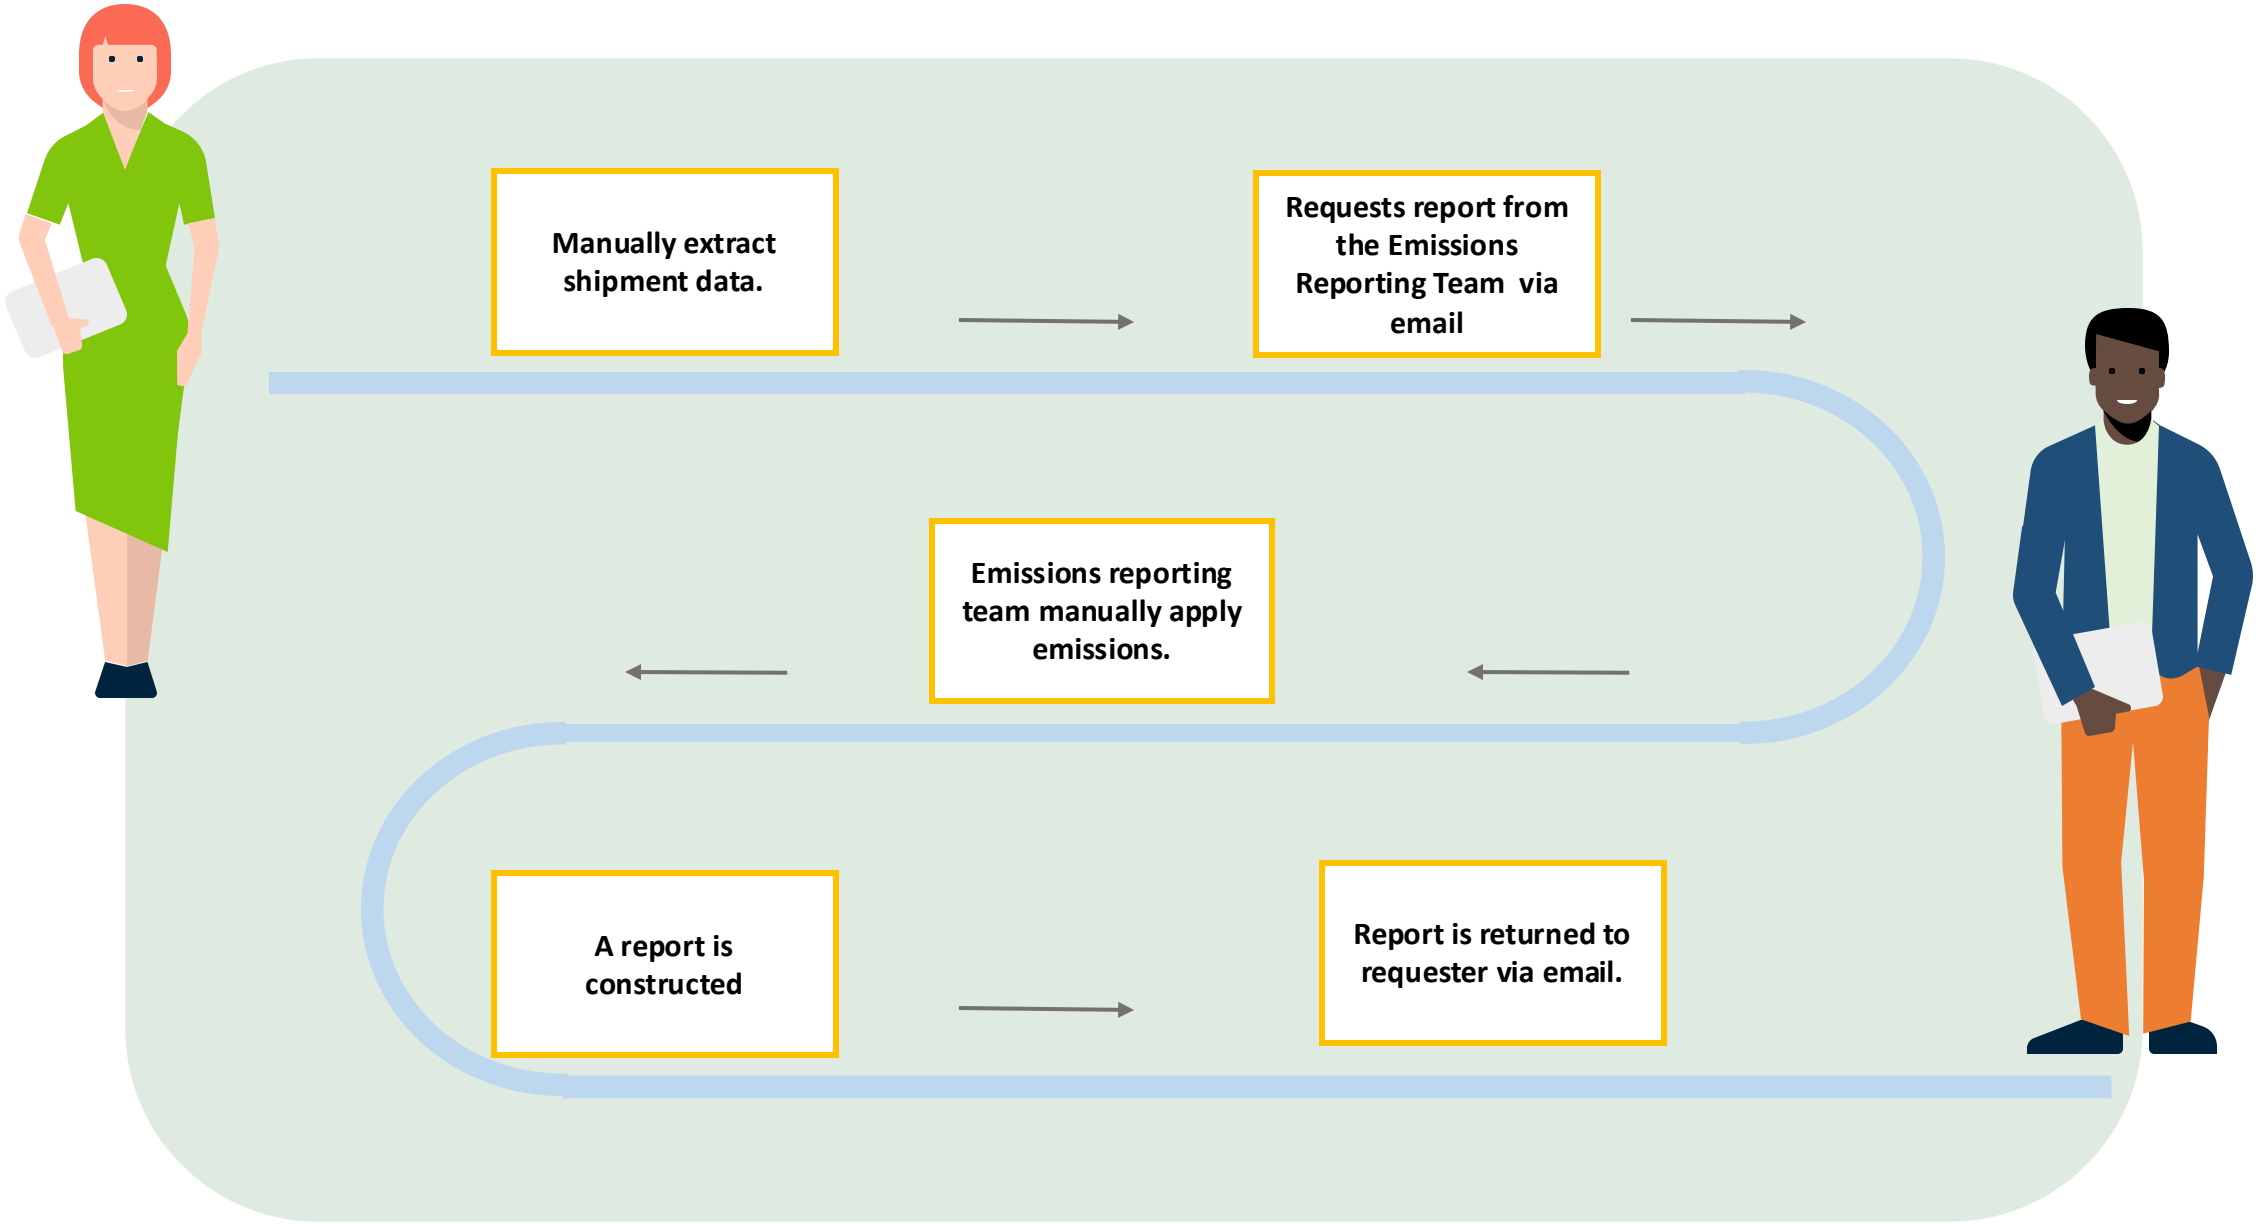
The Problem Of Getting Emissions Data



Who Is Affected?

ECO Delivery Ocean Products

Commercial Sustainability

Contract Management

Regional Product Management

Regional Sales

Account Managers

That's a 1000+ Users depending on slow and unreliable data retrieval

What Improvements Are Needed

Short comings of this approach

- Manual Dependency
- Data Tracking Issues
- Audit Concern
- Prone to Errors
- Inefficiency
- Lack of Scalability

What we want to create

- Automation & Efficiency
- Transparency
- Scalability
- Accuracy & Reliability
- Unified Data
- Auditability

Our Solution: The Emissions Workbench

- Self-Service tool that provides easy and instant access to emissions data.
- Users can view, verify download shipment and emissions data.
- Automates and streamlines the process of creating customer certificates.
- Addresses critical gaps in emissions data traceability and audibility.
- Transparent and scalable by design

What We Want To Demo Today

1. Search and Find Emissions Data

We are going to use the customer code of a customer to pull up the Emissions data for that Customer in a desired date range.

2. Inspect shipment Data on Route level

The app gives you the option to view the emissions data on a shipment level based on the route of the shipment.

3. Download Customer Data

The app allows you to download shipments data for the customer as well as emissions saving data; both in excel format.

4. Generate Certificates for Customer

Use the Certificates tool to create certificates for the customer.

5. Get Certificates and Reports

Once the certificates have been generated, they can be downloaded along with the accommodating report.

Our Success So Far

ALREADY ONBOARDED 1300+ USERS IN

ENABLED ECO DELIVERY OCEAN SALES OF 98K FFE/$31M USD IN 2024

ADDRESSED THE CONCERNS RAISED IN THE 2023 INTERNAL GIA AUDIT

AUTOMATICALLY GENERATE ALL CERTIFICATES FOR ECO DELIVERY OCEAN ECOV1 AND ECOV2 CUSTOMERS
